

tesa® SecurityPrint – cost efficient product protection with flexible design

tesa® SecurityPrint

tesa® SecurityPrint solutions are designed as cost-efficient protective features for mass products requiring less than maximum [counterfeit protection](#). Print technologies employed include guilloches, luminescence inks, UV- and thermo-reactive colours, colour shifting inks, anti-copy protection and many more.

The tesa® SecurityPrint options offer a practically unlimited design flexibility. Direct integration into your packaging design is as easily done as a combination with security technologies to maximise protective performance, e.g. with the tesa Holospot® system.
